

# Dallah Application

---

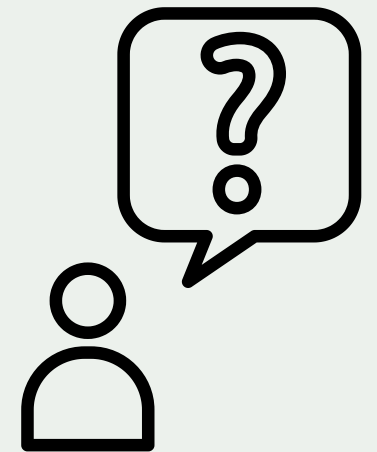

# Project Idea

Our idea is to design how to enroll in Dallah Driving School in an easier way than it is now. We targeted women.

# Problem Definition

The main problems we tried to solve are facilitating the reservation service and making it online, providing a training plan for each customer, providing a bus change service, and providing evening appointments.

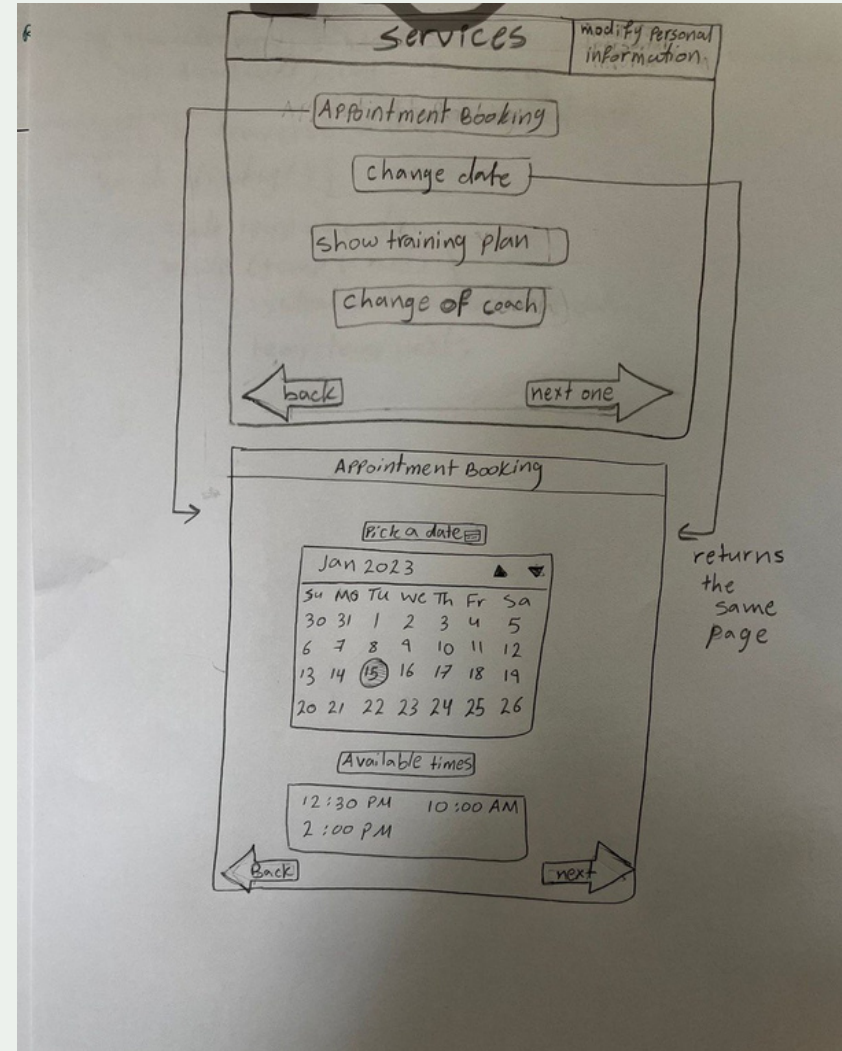

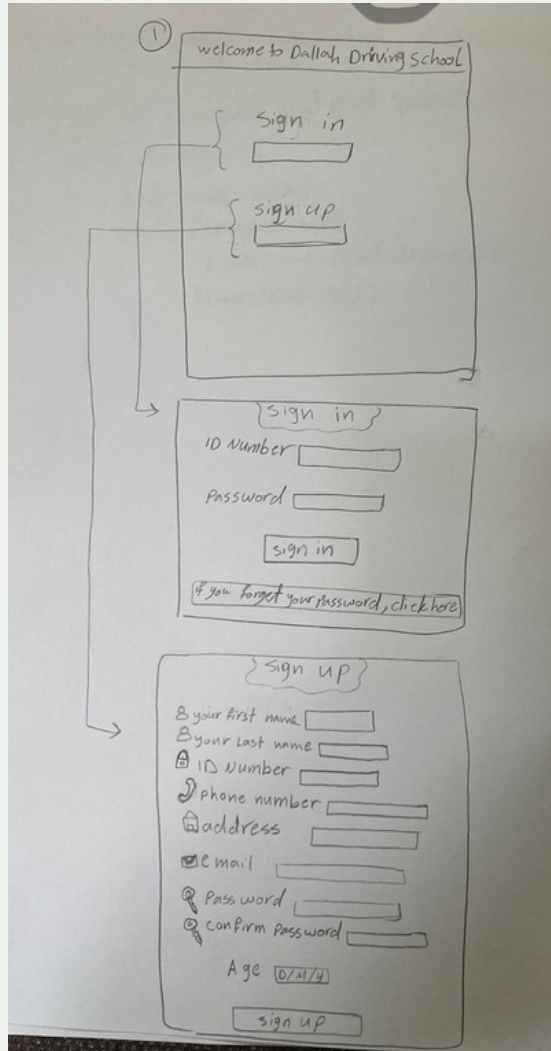

# Finding Users

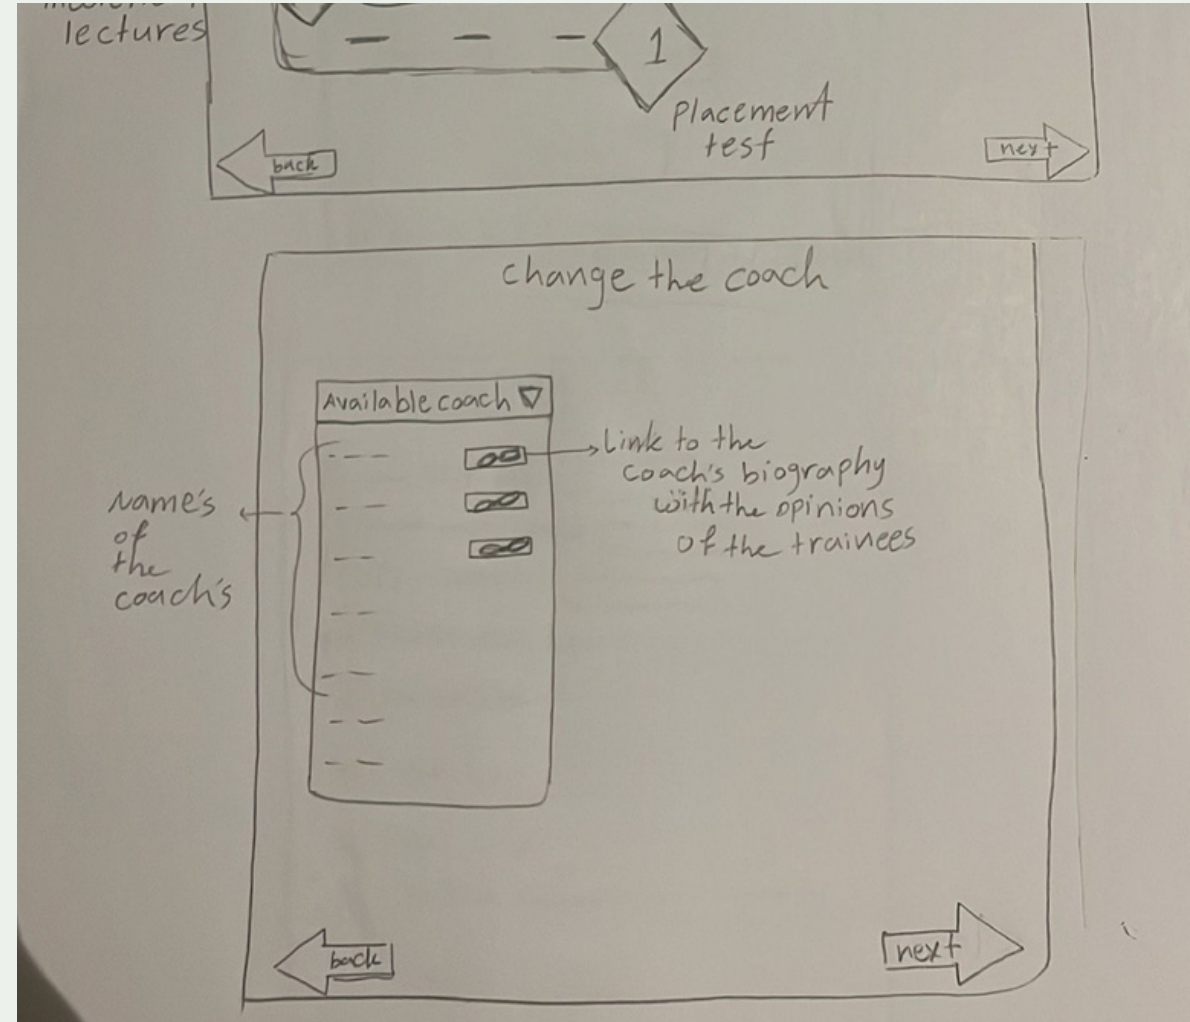

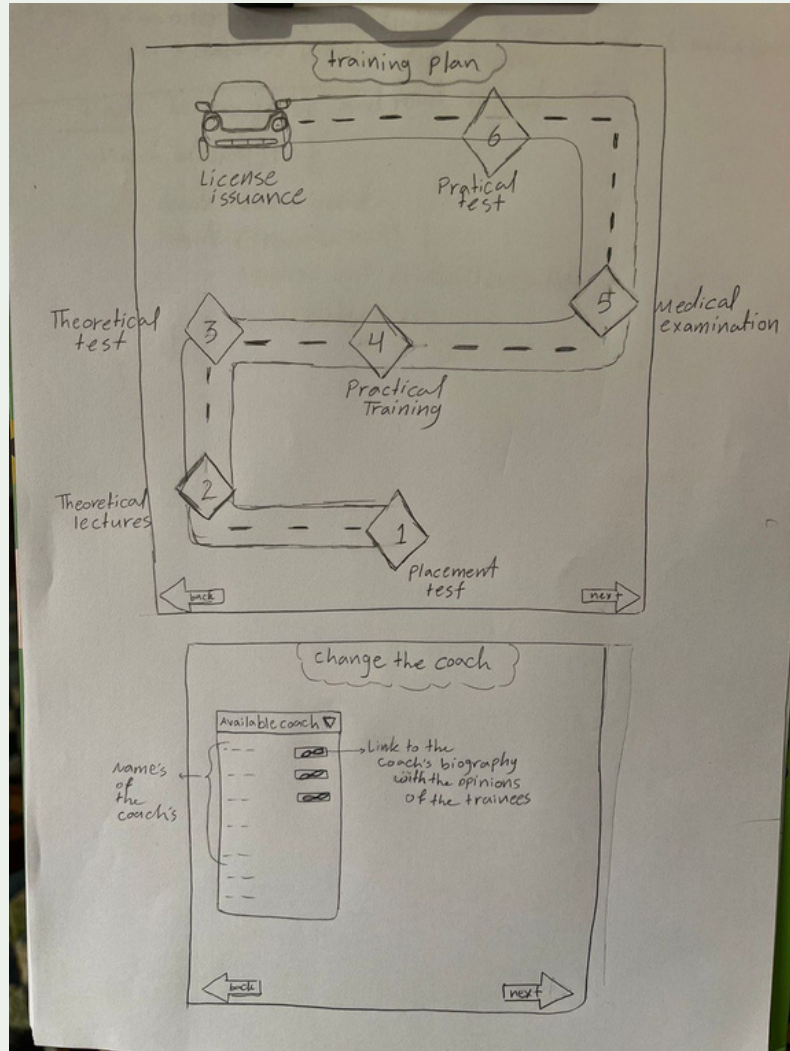

We collected data from users by conducting surveys and talking to many acquaintances who have had dealings with Dallah School, such as our friends and family and some from social media.

## Login page

A high-fidelity mockup of a login page displayed on a smartphone screen. The screen has a light gray background. At the top, the text "sign in" is written in a red, italicized font. Below this, there are two input fields: "ID number" and "Password", each with a light orange rectangular box. A pink button with the text "sign in" in black is positioned below the input fields. At the bottom, there is a small gear icon followed by the text "if you forget your password, click here".

New password reset page

A high fidelity mockup of a mobile application screen for a new password reset page. The screen is light gray with a black border. It features two input fields: the first is labeled "ID number" and the second is labeled "New Password". Both fields are orange with a thin black border. At the bottom center, there is a pink button with the word "Done" in black text.

# Conclusion

It helps the user to do several things in just one application, so that the user can choose the services he wants, such as booking an appointment, choosing the right time, changing the coach, and seeing the training schedule smoothly and easily.
